#### **Ideation phase**

#### Brainstorming and idea prioritization

Date	15 October 2022
Team ID	PNT2022TMID26273
Project name	Web Phishing Detection
Maximum marks	4

Team members:

Selva Viswanath | Pandian | Rohith | Santhosh kumar

#### Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

(1) 5 minutes

#### **PROBLEM**

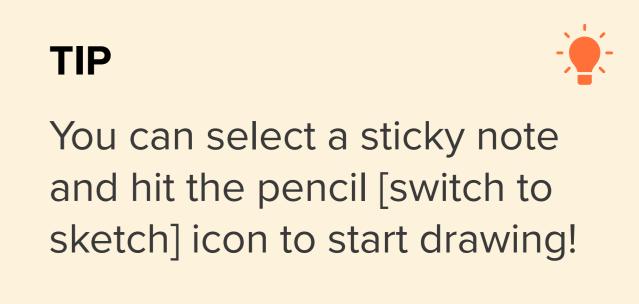

How might we detect
malicious phishing websites?
And also a way to protect
users from getting affected by
those sites

### Brainstorm

Write down any ideas that come to mind that address your problem statement.

### Selva viswanath

Collect genuine email domains

check the urls for past cyber cyber complaints

Block SVGs

Warn the user about the chance of the email being malicious

# Rohith

Check
whether the
mail is
encrypted

Check
through the
cookies
requested

Collect most used words and content used in phishing mails

Block sites asking for higher privileges

# Pandian

Check
whether it
SSL certified

check for input details in the website

Use of secure browser for untrustworthy websites

Letting users know about past attacks in similar sites and mails

## Santhosh kumar

Store the sender and content of past phishing mails and sites

Regular updation of passwords of user accounts

Use of secure 2 factor authenticators like DUO, etc.

Block known attackers

## Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

① 20 minutes

Block sites asking for higher privileges

Collect genuine email domains

Collect most used words and content used in phishing mails

check the urls for past cyber complaints

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

Recovery options if affected

Block SVGs

Warn the user about the chance of the email being malicious

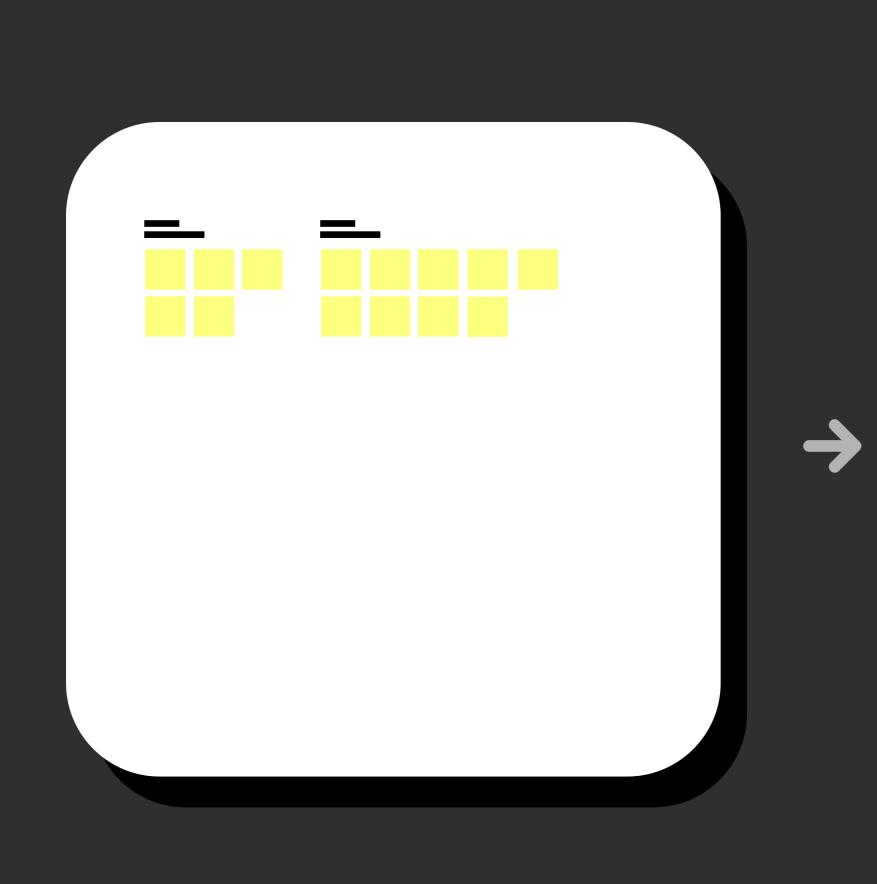

Store the sender and content of past phishing mails and sites

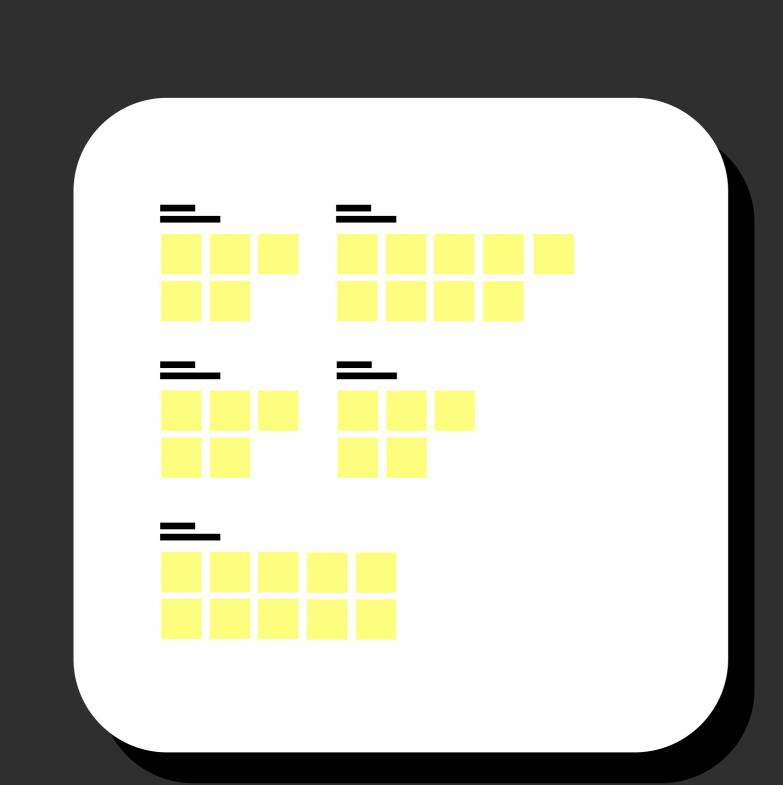

Block known attackers

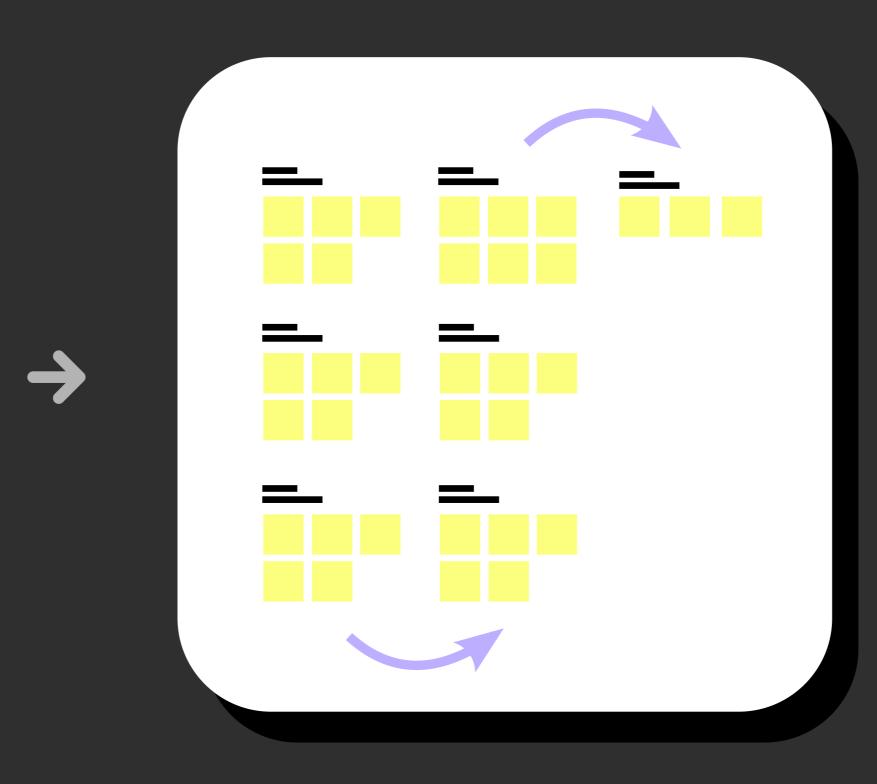

Letting users know about past attacks in similar sites and mails

Check
whether it
SSL certified

Use of secure browser for untrustworthy websites

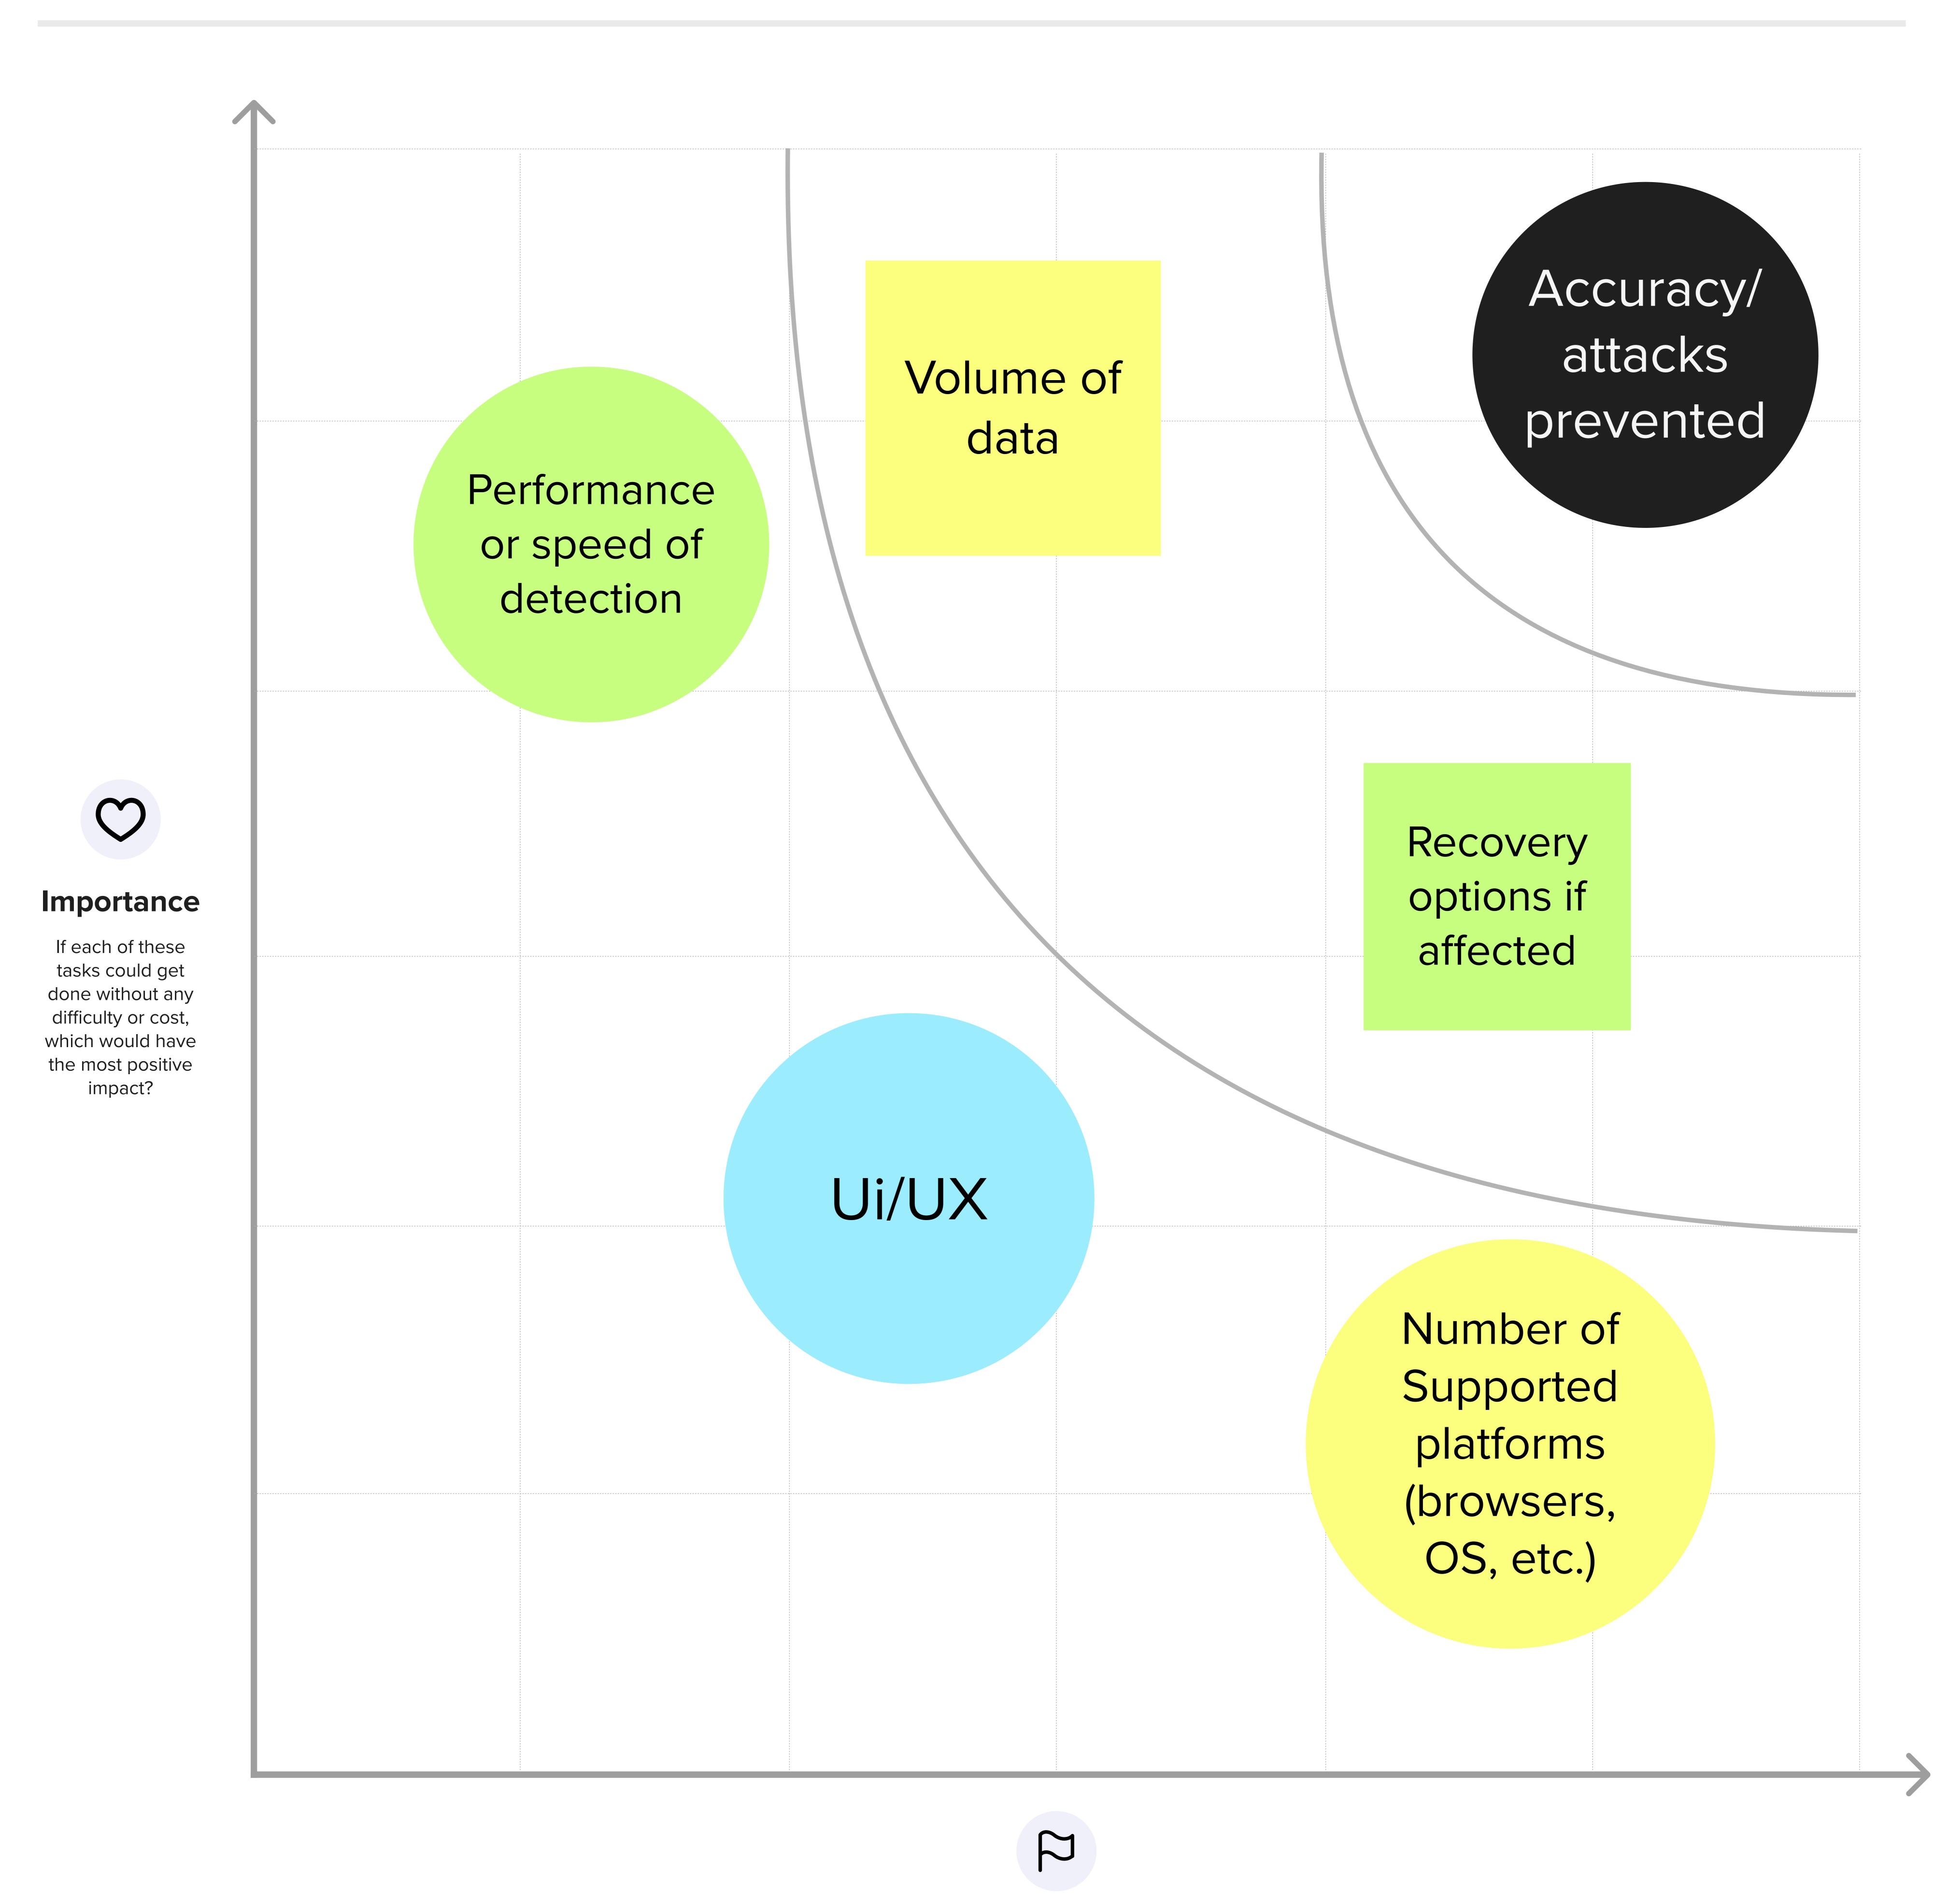

### Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

① 20 minutes

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
